

TicketTriage Sentinel

Submission summary | Roll number i230540

STUDENT & PROJECT

Full name	<i>Saud — add full name as shown in university records</i>
Roll number	i230540
Class / section	<i>To be completed by student</i>
University email	<i>To be completed by student</i>
GitHub username	SaudurRahman997
Agent name	TicketTriage Sentinel
Domain	Support-Ticket Triage

REPOSITORY & LIVE DEPLOYMENT

GitHub repository	https://github.com/SaudurRahman997/TicketTriage---Agent
Final commit hash	<i>To be updated after the final source commit and deployment</i>
Working agent interface	https://tickettrriageagent.vercel.app/
Health endpoint (GET)	https://tickettrriageagent.vercel.app/health
Arena endpoint (POST)	https://tickettrriageagent.vercel.app/arena/run
Manifest endpoint (GET)	https://tickettrriageagent.vercel.app/arena/manifest
API documentation	https://tickettrriageagent.vercel.app/docs
Hosting provider	Vercel

MODEL, EXAMPLE & LIMITATIONS

Default model / provider	<i>Verify the production default at /models before submission</i>
Other available models	<i>Copy the configured model list from /models before submission</i>
Example input	"Triage ticket T-1002 and draft a short reply."
Expected result	Reads the named ticket, classifies it, saves an unsent draft reply in the sandbox, and reports only confirmed actions.
Cold-start / restart limits	Conversation history is held in memory. Vercel may use a fresh or separate function instance, so history may not persist; verify multi-turn clarification on the deployed app.

EVALUATION & SUBMISSION STATUS

Instructor repository access	<i>To be recorded after inviting the instructor (pending or accepted)</i>
Public test results	evaluation/public_results.md — rerun against the final deployed commit
Model comparison	<i>Expected comparison is in README.md; measured two-model results are still required for the assignment.</i>

Before submission: fill the highlighted student and verification fields. Upload this PDF separately with i230540.zip, which must contain one top-level i230540/ folder. Exclude .env, .venv/, .git/, caches, and API keys. Copy the completed values and links to SUBMISSION.md, invite the instructor to the private repository, and confirm Google Classroom shows Turned in.
